

How do intranets and extranets help companies to run their business operations more efficiently?

real time update
share knowledge
encryption of data
home
saves time and money
ideal for home office
saves money
central access point
avoids duplication
data encryption
security
we feeling

Is there a downside? Can intranets and extranets present companies and their staff with problems

The costs and it is maintenance intensive

You need dedicated staff to set it up, administer it and update it

What happens in a breakdown?
Nobody can work on anything

Extensive staff training is required to optimise the use of the intranet

Security - danger can come from within. Malicious employees

Access must be controlled to limit security threat

Access based on need to know/use basis
